KECK PLANET FINDER Project Scientist

Next-generation optical spectrograph for the Keck-I telescope aiming at ~30cm/s radial velocity precision. I am responsible for project and instrument level science execution — including requirements flowdown & testing, leading Data Pipeline development, commissioning planning, and final performance demonstration.

NEID Instrument & Science Team Member

NASA-NSF extreme precision spectrograph for the WIYN telescope aiming at ~30cm/s precision. I co-led the Data Pipeline, fiber feed design, error budget assembly and management, and am part of the GTO team.

HABITABLE ZONE PLANET FINDER Instrument & Science Team Member

Precision near-infrared spectrograph for the Hobby-Eberly telescope searching for planets around red stars at ~1m/s. I am a key architect of the Data Pipeline and fiber feed system, including 2 patented technologies.

PARAS & PARAS-2 Instrument & Science Team Member

Stabilized optical spectrographs on 1.2m & new 2.5m Mt Abu telescopes aiming at <1m/s precision on sky. I wrote the data reduction pipeline for PARAS, and will oversee this effort for science verification on PARAS-2.

SALT HIGH RESOLUTION SPECTROGRAPH Collaborator

Existing instrument on the 10m South African Large Telescope that never successfully commissioned its high precision mode. I am leading instrument stability & simultaneous calibration RV precision measurement effort.

PARVI Collaborator

Diffraction limited infrared spectrograph for the Palomar Observatory aiming at <1m/s precision. I am advising the data analysis team and will be an early science user
